

PROFILE

Product Manager with 2+ years in AlloHealth's Founder's Office, leading growth, lifecycle, payout, and financial-operations products. Increased repeat revenue contribution from 33% to 45%, realised LTV from ₹6.5K to ₹7.5K, and patient-led booking from 35% to 55%. Work from first principles across customer journeys, product design, SQL-led diagnosis, metrics, delivery, and operating adoption.

EXPERIENCE

AlloHealth
Product Manager, Founder's Office · Repeat Business Lead

Jun 2024 – Present
Bengaluru, India

P&L and business operations through Feb 2025; repeat-business ownership from Mar 2025. Led a blended team of 2 analysts, 2 engineering interns, 2 customer experience managers, and multiple specialised AI agents.

- Increased repeat revenue contribution from **33% to 45%** and realised quarterly LTV from **₹6.5K to ₹7.5K** by owning the post-purchase loop across fulfilment, treatment adherence, follow-up booking, completion, reschedules, no-shows, and repurchase.
- Built City Heads funnel dashboards and redesigned the doctor-to-agent handoff for ~5,000 eligible patients/month using in-product prompts, timers, and operating workflows; improved handoffs from **35% to 85%**, with handed-off patients purchasing at ~2× the baseline rate.
- Defined chatbot states, API/webhook handoffs, escalation events, and observability; built a daily AI-assisted intelligence system across ~7,000 monthly WhatsApp chats using SQL, n8n, and Langfuse, increasing patient-led booking from **35% to 55%** and enabling 88% of high-intent patients to self-book.
- Reduced weekly calling tasks from ~9,000 to ~6,500 (**28%**) by consolidating duplicate objectives, expiring obsolete tasks, and carrying prior context into the latest action.
- Translated payout policy into contract/slab schemas, approval states, calculation APIs, and auditable ledger events; shipped in four weeks for 60+ doctors and ~₹25L/month, reducing payout cost/revenue from **21.7% to 16.7%**.
- Owned cohort, LTV, indirect P&L, and books-aligned reporting for Rainmatter-led pre-Series A diligence; improved gross margin by ~**27%** across three high-velocity SKUs through stockout management, vendor changes, and price negotiation.

Cactus Communications
Product Intern · AI and Research Products

Aug 2023 – Feb 2024
Mumbai, India

- Used SQL, funnel analysis, competitive research, and customer evidence to identify growth opportunities and inform institutional partnerships.
- Built a GenAI prototype that compressed 10-page journal guidelines into decision-ready summaries; won "Best Product" at an organisation-wide Google Cloud product hackathon.

Independent Markets Trader
Full-time · Equities and Derivatives

2022 – 2023
Independent

- Traded equities and derivatives full-time after graduation; applied first-principles research, position sizing, risk controls, and post-trade reviews. Built on two years managing a ₹10L pledged-capital account to ~₹16L during college.

SELECTED PRODUCT & SYSTEMS WORK

Affordable Commerce inside super.money

Independent zero-to-one credit-commerce case spanning borrower and seller journeys, checkout, unit economics, payouts, settlement, APIs, failure recovery, risk, and GTM.

github.com/bnamanjain/super-money-affordable-commerce

Healthcare Journey Systems

Sanitized production study of system architecture, API contracts, state machines, event/webhook flows, schema design, observability, idempotency, and failure recovery.
